NEHEMIAM MONTERO

SOFTWARE DEVELOPER | WEB, APPLICATION, IOT & GAME DEVELOPMENT

monteronehemiah@gmail.com | +63 908 663 0712 | Valencia, Virac, Catanduanes

GitHub: github.com/monskies | LinkedIn: linkedin.com/in/nehemiam-montero

PROFESSIONAL SUMMARY

Software Developer with hands-on experience in web development, application development, IoT systems, networking, and game development. Experienced with Laravel, React, PHP, Java, Kotlin, MySQL, C/C++, Arduino, Unreal Engine 5.4, and OpenWrt. Has developed and supported web applications, embedded systems, captive portals, Piso WiFi systems, and interactive game systems. Comfortable with troubleshooting, documentation, deployment, and client- and contract-based projects.

PROFESSIONAL EXPERIENCE

Contract Game Developer | February 2026 - Present

Confidential Client - Digital Card Game Project

- Developing a client-owned digital card game in Unreal Engine 5.4 using Blueprints and UMG.
- Implementing card mechanics, gameplay systems, card interactions, drag-and-drop behavior, UI logic, and reusable card components.
- Designing and integrating game logic while maintaining a structured and maintainable Blueprint-based project.
- Working under a contract arrangement while maintaining confidentiality of the client, game title, and proprietary project details.

Web Developer / IT Specialist | June 2025 - January 2026

Mini Raon Electronics Equipment and Trading - Virac, Catanduanes

- Developed web applications using React and custom HTML/CSS portals.
- Built voucher-based captive portals using Omada Controller.
- Created Python- and Arduino-based sensor alarm systems.
- Designed and documented network layouts for Starlink installations.
- Configured and deployed Orange Pi-based Piso WiFi systems.
- Produced technical documentation and installation guides.
- Assisted customers with solar and power system solutions.

IT Tech Intern | April 2024 - July 2024

Taguig City University - Pateros

- Monitored and resolved technical support requests and provided assistance with IT-related issues.
- Assisted in troubleshooting and resolving hardware and software problems.

SELECTED PROJECTS

RichFi - Coin-Operated WiFi Vendo Machine (PisoWiFi) System

Technologies: OpenWrt, ESP8266 (Arduino/C++), Shell scripting (ash/BusyBox), nodogsplash, uhttpd/CGI, JSON, iptables, DHCP, captive portal, Node.js

- Designed and deployed a coin-operated WiFi vending system using OpenWrt, an ESP8266 coin acceptor, a custom captive-portal backend, and an administration dashboard.
- Implemented session and rate management, captive-portal workflows, device communication, and network configuration for a PisoWiFi environment.

MCA Montessori School Management Portal | Full-Stack Web Application

Technologies: PHP (Laravel), MySQL, HTML, CSS, JavaScript, Bootstrap, Laravel Blade, Hostinger

- Developed a full-stack web application for online enrollment, grade management, attendance tracking, and multi-role access for administrators, instructors, and students.

Bluetooth Proximity Reminder System for Essentials | IoT Device with Android Application

Technologies: Kotlin, C/C++, Android Studio, Bluetooth/BLE, Arduino, ESP8266, Firebase

- Developed a mobile-to-embedded solution that alerts users when they move out of range of paired essential items by monitoring Bluetooth RSSI.

St. Dominic Veterinary Clinic Management System | Java Desktop Application

Technologies: Java (NetBeans), MySQL (XAMPP), JDBC, Swing

- Developed a desktop-based management application for veterinary clinic workflows and record management.

Employee Record Management System | Java Desktop Application

Technologies: Java (NetBeans), MySQL (XAMPP), JDBC, XML, Swing

- Built a desktop application for managing employee records using Java and MySQL.

Wet Market Online Shopping | Java Desktop Application Prototype

Technologies: Java (NetBeans), MySQL (XAMPP), JDBC, XML, Swing

- Created a prototype shopping application with a Java desktop interface and MySQL-backed data management.

TECHNICAL SKILLS

Programming: Java, PHP, JavaScript, Kotlin, C/C++, Python, SQL
Web Development: Laravel, React, HTML, CSS, Bootstrap, Laravel Blade, REST/API concepts
Game Development: Unreal Engine 5.4, Blueprints, UMG
IoT / Embedded: Arduino, ESP8266, Bluetooth/BLE, Firebase, sensor systems
Networking / Systems: OpenWrt, nodogsplash, uhttpd/CGI, iptables, DHCP, captive portals, Omada Controller, Starlink networking
Tools / Platforms: MySQL, XAMPP, Hostinger, Android Studio, NetBeans, Git/GitHub
Professional: Troubleshooting, documentation, analytical thinking, communication, problem-solving, time management

EDUCATION

Bachelor of Information Technology | June 2019 - September 2024

Pateros Technological College
